

DEMO LABORATORY TEST REPORT

Pressure Cooker - Hydrostatic Pressure Test

DEMO / TRAINING DOCUMENT ONLY. This is not a BIS certificate, not an official laboratory report, and not evidence of real product conformity. It is created only to test the SIH26107 prototype evidence-upload workflow.

Report Number	DEMO-LAB-PC-2026-001
Laboratory	Demo Engineering Test Laboratory
Report Date	05 September 2026
Customer	Prototype Manufacturer - Demo
Product	Domestic Pressure Cooker
Model	PC-5L-AL
Nominal Capacity	5 Litres
Body Material	Aluminium
Declared Operating Pressure	100 kPa
Test Type	Hydrostatic Pressure / Proof Test

Test Method

The sample pressure cooker was filled with water, air was removed, and internal pressure was increased in a controlled manner. Pressure was held while the body, lid, joints, handle attachments, and safety-related areas were visually observed for leakage or permanent deformation.

Test Conditions and Measurements

Parameter	Recorded Value
Test medium	Water
Ambient temperature	27 C
Declared operating pressure	100 kPa
Applied proof pressure	200 kPa
Hold time	10 minutes
Visible leakage	None observed
Permanent deformation	None observed
Abnormal lid movement	None observed

Result

Overall Result	PASS
Observation	No visible leakage or permanent deformation was observed during this demo proof-pressure test.

Evidence Metadata for Prototype Extraction

Model: PC-5L-AL

Report Number: DEMO-LAB-PC-2026-001

Laboratory: Demo Engineering Test Laboratory

Test Name: Hydrostatic Pressure Test

Result: PASS

Measurement: Applied proof pressure 200 kPa for 10 minutes

Important: This demo report only proves that the prototype can ingest and extract evidence fields. The presence of this file must not automatically mean an actual BIS requirement is satisfied.
